In the United States, a notice of proposed rulemaking published on December 20, 1994, in the Federal Register and after a review of relevant data, the Deputy Administrator of the Drug Enforcement Administration (DEA) proposed to place 4-bromo-5,5-dMPEA into Schedule I, making 2C-B illegal in the United States.[54] This became permanent law on July 2, 1995.[55] References ^ Papaseit E, Farràs M, Pàmies-Màlaga C, Torrens M, Ventura M, Pujadas M, de la Torre R, Gonzàlez D (2018). They have been used internally much more rarely due to the inherent dangers of ingestion. Luxembourg In Luxembourg, 2C-B is a prohibited substance since 2001.[46] Netherlands In the Netherlands, 2C-B was scheduled on July 9, 1997. Mixed with maize beer and tobacco leaves, it has been used to drug wives and slaves before they were buried alive with their dead lord.[21][25][26] In the Northern Peruvian Andes, shamans (curanderos) traditionally used Brugmansia species for initiation, divination, and black magic rituals.[21] In some Latin American countries such as Colombia and Peru, members of the genus Brugmansia are reportedly used by malevolent sorcerers or "bad shamans" in some ayahuasca brews in attempt to take advantage of tourists.[27] The species that are typically used for these purposes include Brugmansia suaveolens and Brugmansia arborea among others.[28] Toxicity All parts Brugmansia are potentially poisonous, with seeds and leaves being especially dangerous. [23] [29] Brugmansia are rich in scopolamine (hioscinc), hycine and several other tropane alkaloids, which can lead to anticholinergic toxidrome and delirium. [30] The effects of ingestion may include the paralysis of smooth muscles, confusion, tachycardia, dry mouth, pregnancy, tremors, migraines, headaches, deficient coordination, delusions, visual and auditory hallucinations, MINDIAIS, rapid start cyclopope and death. [32] [32] [32] [32] [32] [33] The allelopathic effects of Brugmansia were described in the Pathology of the magazine as "terrifying instead of pleasant". [34] The Christina Pratt author, in an encyclopedia of shamanism, says that "Brugmansia induces a powerful trance with violent and unpleasant effects, disgusting after the effects and, sometimes, temporal madness." [23] These hallucinations are often characterized by the total loss of consciousness that one is amazing, the disconnection of reality (psychosis) and the amnesia of episode, as an informed example in psychiatry and clinical neuroscience of a young That he agrounded his own penis and tongue after drinking only a cup of Brugmansia bloody. [35] In 1994, in Florida, 112 people were admitted to hospitals after ingesting Brugmansia. [36] leading a municipality to prohibit the purchase, sale or cultivation of Brugmansia plants. alkaloids in all parts of the plant differ markedly. ^ Fuller, T. 6 (3): 148-151. pp. 68, 69. February 1, 2011. PMID 8027974. Additional reading of hay, A., M.
